

SAMPLE INTERVIEW QUESTIONS

Keep this card with you during interviews. Open-ended questions show you what the student understands and give quieter students room to shine.

TO ASSESS UNDERSTANDING

- *"Can you explain your hypothesis?"*
- *"Why did you choose this topic?"*
- *"What surprised you about your results?"*
- *"If you could do it again, what would you change?"*
- *"How does your project relate to real-world applications?"*

TO ENCOURAGE DEEPER THINKING

- *"What other factors might have affected your results?"*
- *"What would be your next step in this research?"*
- *"How confident are you in your conclusions?"*

REMEMBER

Give every student a chance to talk before you evaluate. Ask, listen, then follow up on what they said. If a project is outside your field, focus on process: how they designed the experiment, handled data, and drew conclusions.
