

HYPOTHESIS WORKSHEET

A hypothesis is a testable prediction about what will happen in your experiment. The clearest hypotheses follow an if, then, because pattern that names what you will change, what you expect, and the reason behind it.

EXAMPLE

If I increase the amount of fertilizer, then the plants will grow taller, because fertilizer provides nutrients that support growth.

BUILD YOURS

IF I change...

THEN I predict...

BECAUSE...

CHECK YOUR HYPOTHESIS

A GOOD HYPOTHESIS IS

- ☐ Specific
- ☐ Testable
- ☐ Backed by a clear reason

A POOR HYPOTHESIS IS

- Vague
- Not testable
- Missing any reasoning

IF YOU GET STUCK

Take a question from your topic brainstorming and rewrite it as an if, then, because statement. If you cannot test it with the materials and time you have, narrow it until you can.
